

Save energy, save money

Entertainment
and living

Your guide to a healthier home and lower bills

Getting comfy

There's nothing like settling down with a cup of tea for some entertainment at the end of a long day, and it doesn't need to make your power bill painful at the end of a long month.

Turn lights off when you're not using them, and replace old incandescent bulbs with LEDs if you can.

When you boil the jug, only boil as much water as you need.

Many electronics such as TVs, game consoles, computers and phone chargers use power on standby. Turn them off at the wall when you're not using them — plugging a few appliances into a multiboard can make this easier.

Figure out what appliances are using your power

We can loan you a plug-in monitor to check your household appliances' energy use. Call us on 0800 367 546 or request one online at thelinescompany.co.nz/forms.

For more tips on keeping your home healthy and your power bill low, see our pocket guides or visit the EECA website
